

Hoofcount Footbath Chemical

HOOFCOUNT EXTRA F is a liquid blend of Formaldehyde, Copper, Zinc and Aluminium. This unique blend offers the most effective solution to not only tackle Digital Dermatitis and prevent reoccurrences, but also condition feet.

The **HOOFCOUNT EXTRA F** will continue to be effective even in lower temperatures, unlike formaldehyde alone.

Our new **HOOFCOUNT MAXI G** combines Copper and Zinc with Glutaraldehyde and surfactants to provide an effective alternative to Formalin based solutions.

Still with the same blend as our **Extra F** but without the formalin, our product continues to incorporate copper and zinc into your footbath routing without having to handle these products yourself.
