Hoofcount TRANSIT

ONE STOP HEALTH STATION FOR DRY COW PRECISION MANAGEMENT

A new, one-stop integrated health station enabling individual dry cows and young stock to be routinely monitored, Footbathed, fed and weighed.

HOOFCOUNT Transit enables farmers to precisely manage their dry cows and in-calf heifers in the final weeks prior to calving and provide them with the opportunity to enter lactation in **OPTIMAL HEALTH**.

Individual daily feed allocation can be programmed in to the system, ensuring each cow receives adequate energy intake to maintain body condition. The optional weighing system notifies any abnormal deviations.

Data and non-visits are collected by the web based data package.

Optional 'Holding Gate' makes for easier routine inspections.

HOOFCOUNT Transit is another innovative aid to routine precision management, helping dairy farmers towards greater herd efficiency.
